## **DETAILED ACTION**

### ***Response to Amendment***

In response to applicant's amendment received 8/23/05, all requested changes have been entered.

### ***Response to Arguments***

The Examiner agrees with the main argument made that the number of copies is not received from a software application. However, the Examiner deemed that there is no support for this amendment and that the specification only discusses the changing of the multiple copies by an user (e.g. see page 4, lines 25-29 and page 5, lines 1-3 of the specification). Claims 1-15 and 21 all now recite this feature and are considered to be new matter.

In regards to claim 16-20, the Examiner has considered the amended claims and the argument that the reporting of the one copy is now non-obvious. The Examiner agrees that it would be non-obvious but the claim is indefinite in that it lacks essential steps as to why reporting that one copy will be printed when multiple copies have been specified. For example, if I specified 5 copies to be printed, and there was a report that one copy will be printed, I would have no clue why that is the case. Furthermore, the Examiner would like to point out that printing one copy of a multiple copy job is commonly known as test or proof printing, in which an user would simply print one copy of a multiple copy job to ensure proper printing of the job before printing the rest of the copies, which could significantly reduce wasted paper/ink that would have resulted from printing multiple copies of a job which all came out wrong.

Also, the Shima reference does indeed suggest that the print driver assumes control of the printing. The Examiner will again cite column 7, lines 7-12 and especially lines 9-12 where the print driver uses gathered information to produce a control command. The fact that it produces a control command suggests that it can control the printing process.

***Claim Rejections - 35 USC § 112***

Claims 1-15 and 21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. As mentioned above in the response to the arguments, the specification has insufficient support for the fact that the number of copies is received from a software application.

Claims 16-20 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: the reason as to why a one copy would be reported when an user has specified multiple copy printing.
